

2D Array Practice

Task 1: Matrix Input and Output

- Create a 3×3 integer array.
 - Read values from the user.
 - Display the matrix in row and column format.
-

Task 2: Sum of Each Row

- Create a 4×3 integer array.
- Read all elements.
- Find and print the sum of each row.

Example Output:

None

Row 1 Sum = 25

Row 2 Sum = 18

Row 3 Sum = 30

Row 4 Sum = 22

Jagged Array Practice

Task 4: Student Marks

- Create a jagged array for 4 students.
 - Student 1 has 2 subjects.
 - Student 2 has 4 subjects.
 - Student 3 has 3 subjects.
 - Student 4 has 5 subjects.
 - Read all marks and display them.
-

Task 5: Sum of Each Row in a Jagged Array

Create the following jagged array:

None

```
10 20
30 40 50
60
70 80 90 100
```

Write a program to:

1. Print all the elements.
2. Find the sum of each row.
3. Find the total sum of all elements.
