

# 1. ATM Menu System

Write a Java program that displays the following menu:

```
None
==== ATM MENU ====
1. Check Balance
2. Deposit Money
3. Withdraw Money
4. Mini Statement
5. Exit
```

Take the user's choice using `Scanner`.

Using a **switch-case**, display:

- 1 → "Your balance is ₹25,000"
  - 2 → "Enter amount to deposit"
  - 3 → "Enter amount to withdraw"
  - 4 → "Displaying mini statement..."
  - 5 → "Thank you for using our ATM."
  - Any other number → "Invalid Choice"
- 

# 2. Grade Description

Accept a grade character from the user.

Possible inputs:

```
None
A
B
C
D
F
```

Using **switch-case**, display:

- A → Excellent
- B → Very Good

- $C \rightarrow \text{Good}$
- $D \rightarrow \text{Needs Improvement}$
- $F \rightarrow \text{Failed}$

If the user enters any other character, print:

None

Invalid Grade

---

### 3. Calculator

Accept

- First number
- Second number
- Operator (+, -, \*, /, %)

Example:

None

Enter first number: 20

Enter second number: 5

Enter operator: \*

Using **switch-case**, perform the selected operation.

If an invalid operator is entered, print:

None

Invalid Operator

---

### 4. Month Name

Accept a number from **1 to 12**.

Using **switch-case**, print the corresponding month.

Example:

None

Input: 7

Output: July

If the number is outside 1–12, print:

None

Invalid Month

---

## 5. Food Ordering System

Display the following menu:

None

1. Pizza
2. Burger
3. Sandwich
4. Biryani
5. Coffee

Take the user's choice.

Using **switch-case**, display:

- Item name
- Price

Example:

None

Burger

Price = ₹120

If the choice is invalid, print:

None

Item Not Available
