
1. Check Voting Eligibility

Write a Java program to check whether a person is eligible to vote.

- Age should be **18 or above**.
- Print "**Eligible**" or "**Not Eligible**".

Use the **logical operator**.

2. Student Pass or Fail

A student passes only if:

- Marks are **greater than or equal to 35**
 - Attendance is **75% or more**
-

3. Weekend Check

Suppose today is represented by an integer.

- 6 = Saturday
 - 7 = Sunday
-

4. Login Validation

A user can log in only if:

- Username is correct
- Password is correct

Assume:

Java

```
boolean validUser = true;  
boolean validPassword = false;
```

Print whether login is successful.

5. Age Restriction

A movie is allowed only if the person's age is **not below 18**.

6. Scholarship Eligibility

A student gets a scholarship if:

- Marks are above 90 **OR**
 - Sports quota is true
-

7. Driving License

Check whether a person can apply for a driving license.

Conditions:

- Age ≥ 18
 - Has Aadhaar card
-

8. Employee Bonus

Bonus is given only if:

- Experience ≥ 5 years
 - Performance rating ≥ 4
-

9. Find Larger Number

Read two integers.

Use the **ternary operator** to print the larger number.

10. Even or Odd

Read an integer.

Print "Even" or "Odd" using only the **ternary operator**.

11. Positive or Negative

Write a program that prints

- "Positive"
- "Negative"

using the ternary operator.

12. Pass or Fail

Read student's marks.

If marks are **35 or more**, print "Pass" otherwise "Fail".

Use only the ternary operator.

13. Maximum of Three Numbers

Read three integers.

Use **nested ternary operators** to print the largest number.

14. Character Type

Read a character.

Using the ternary operator, print:

- "Uppercase" if it is between 'A' and 'Z'
 - Otherwise print "Not Uppercase"
-

15. Grade Calculator

Read student's marks.

Using **nested ternary operators**, print:

- "A" if marks ≥ 90
- "B" if marks ≥ 75
- "C" if marks ≥ 60

- "D" if marks ≥ 35
 - "Fail" otherwise
-

Challenge Questions (Mix of Logical + Ternary)

Try solving these after completing the above:

1. Check whether a year is a leap year using logical operators and print the result using a ternary operator.
2. Read age and citizenship status. Print whether the person is eligible to vote using a ternary operator.
3. Check if a number is divisible by both 3 and 5.
4. Check if a character is a vowel using logical operators.
5. Read salary and years of experience. Print "Bonus Eligible" or "Not Eligible" using the ternary operator.

These questions cover the most common interview and classroom scenarios involving logical and ternary operators.
