

Practicing star patterns is one of the best ways to improve your understanding of nested loops (**for** loops), conditions, and logic in Java.

1. Square

None

```
* * * * *
* * * * *
* * * * *
* * * * *
* * * * *
```

2. Left Triangle

None

```
*
* *
* * *
* * * *
* * * * *
```

3. Inverted Left Triangle

None

```
* * * * *
* * * *
* * *
* *
*
```

4. Right Triangle

None

```

    *
  * *
* * *
* * * *
* * * * *
```

5. Inverted Right Triangle

None

```
* * * * *
  * * * *
    * * *
      * *
        *
```

6. Rectangle (4 × 6)

None

```
* * * * *
* * * * *
* * * * *
* * * * *
```

7. Horizontal Line

None

```
* * * * *
* * * * *
```

8. Vertical Line

None

```
*
*
*
*
*
*
```

9. Increasing Numbers of Stars

None

```
*
**
***
****
*****
```

10. Decreasing Numbers of Stars

None

```
*****
****
***
**
*
```

11. Full Pyramid

None

```
  *
 ***
*****
*****
*****
```

12. Inverted Pyramid

None

```
*****
*****
*****
***
*
```

13. Half Diamond

None

```
*
**
***
****
*****
*****
****
***
**
*
```

14. Hollow Square

None

```
*****
*      *
*      *
*      *
*****
```

15. Pyramid with Alternate Stars

None

```
  *
 * *
* * *
* * * *
```

16.full diamond

```
  *

 ***
****
*****
*****
*****
*****
****
 ***
  *
```

Interview Tip

Most star pattern questions can be solved using these four concepts:

- **Rows:** Outer loop controls the number of rows.
- **Columns:** Inner loop controls the characters printed in each row.
- **Spaces:** Print leading spaces before stars for alignment.
- **Stars:** Decide how many stars to print based on the current row.

Master these concepts, and you'll be able to solve almost any star pattern asked in Java interviews.
